

BLACKSTONE TURF TYPE PERENNIAL RYEGRASS

Blackstone is the ideal perennial ryegrass for all your fine turf needs. Blackstone has excellent turf quality, ranking third in the latest NC State winter overseeding trial. Blackstone exhibits a very dark green color and retains its color throughout the season. In addition, Blackstone establishes well, providing quality cover quickly. Blackstone was bred for improved transition, both into and out of the overseeding season. In addition, Blackstone's controlled growth during the season means fewer mowings and less clippings.

Features:

- Excellent Turf Quality
- Dark Green Colour
- Fine Bladed
- Fast Germination
- Selected For Overseeding

Areas of use:

- Landscaped areas sports turf
- Fairways
- Warm-season overseeding

Seeding and overseeding:

Blackstone readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 3-4kg/ 100m². Periodic reseeding at 2-3kg/100m². Maintains density for visual appearance and durability. For overseeding dormant warm season grasses use a higher rate.

Maintenance:

Blackstone will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2" and above. Blackstone can be maintained at fairway cutting heights when appropriate management practices are observed.
