

ECONOMY PASTURE

DEEP ROOTED PERENNIAL, V-SERIES BLENDS

- Deep rooted varieties
- Ideal for erosion control
- Good salt tolerance
- Proven performance
- Higher productivity

Economical way to top up run down or overgrazed perennial pastures.

Seed Mixture By Count:

- 80% Perennial Ryegrass
- 12% Dalkeith Sub Clover
- 8% Riverina Sub Clover

Rainfall:
450mm+

Sowing Rates:

Sow at 12-25kg per hectare. For surface sowing or poor seed beds use higher rates. Reduce rates in more stable areas.

Paddock preparations:

Can be direct drilled or sown into a cultivated seedbed. Can be oversown into existing pasture sward. Cultivate seed bed if the ground is uneven.

Sowing depth:

Shallow (10-15mm), using a roller will ensure good seed-soil contact and improve germination rates

Weed control:

A weed-free seedbed allows for better establishment results. The use of herbicides prior to sowing can alleviate competition from weeds. Speak to your local agronomist for herbicide recommendations.

Fertiliser:

The use of fertiliser at sowing will improve the establishment and yield of pasture.

Grazing management:

Pasture should not be grazed until adequately anchored (can not be pulled out easily). Ryegrass is better suited to rotational grazing, allowing plants to re-grow to the 2-3 leaf stage before grazing again.
