

TURBOCOTE KIKUYU

The Popular Choice for Turf Managers throughout Australia Turbocote Kikuyu Lawn seed is a warm season grass common through most parts of Australia. It spreads by vigorous stolons and rhizomes making a very drought hardy plant with minimal maintenance requirements. Turbocote Kikuyu, improved Kikuyu grass (*Pennisetum clandestinum*) is the popular choice for Turf Managers throughout Australia when choosing a seeded variety. It has a medium texture, robust turf density and will establish and persist better on poor soils with low fertility.

What is Turbocote?

Turbocote is a unique formulation consisting of a combination of biostimulants and seaweed concentrate fertiliser that greatly assists in the seedlings ability to absorb nutrients in the soil, improve root and shoot development and recover from wear and stress events. Our Turbocote technology contains a moisture absorbent coloured coating that increases germination and establishment performance.

Turbocote features and benefits:

- Improves plants ability to absorb nutrients from the soil
- Promotes a sustainable healthier plant system
- Best equipped to maintain a lush lawn
- Better root health, better plant health, better lawn
- Greatly improves recovery of both the root and leaf following damage
- Retains important moisture around the young emerging seedling for significant improvement in establishment

Uses:

- Ideal for low maintenance turf areas
- Excellent for erosion control on hillsides and banks
- Grows well where other grasses won't
- Suitable for recreation, sportsfields and lawns

Application:

- New Turf: 1kg/100m²
- Oversowing: use approx half new sowing rate
